for domestic block paving products

Tobermore is proud of its quality assurance programme as well as its high standard of excellence. We guarantee the structural integrity of our paving blocks, when supplied for private use for a domestic project in a lightly trafficked area, for 25 years from the date of purchase. During this period, we will replace any paving blocks which fail to meet this guarantee, provided that they were suitable for use in relation to the relevant project and, if installed, were installed properly.

This guarantee is non-transferable, except upon any change of ownership of the premises, and does not cover installation defects or replacement works. It does not confer any rights other than those expressly stated and does not cover any claims for consequential loss or damage. This guarantee is offered as an extra benefit and does not affect your statutory rights as a consumer.

# landscape design services

## premier on-site

### hard landscape design service

Book an appointment with one of our qualified landscape designers and receive an on-site consultation on hard landscaping for an agreed fee. This service is suitable for large projects that require design on more than one area of the scheme.

When a designer is on site they will measure your area(s), discuss our product choices and draw out a concept sketch. The designer will then take the drawing away to make any amendments and to finalise the plan. Within two weeks of the site visit you will receive a CAD plan to scale and a priced quotation.

fees  
will be  
refunded  
on purchase  
of Tobermore  
products

NOTE: charcoal setts could be replaced by golden setts

For further information on any of our services or to book an appointment with a landscape designer, contact your nearest Paving & Walling Centre.

**30min free**

hard landscape  
design service

Book an appointment with one of our qualified landscape designers and receive one **free** 30 minute design consultation on hard landscaping at your nearest Paving & Walling Centre. This service is ideal for small areas such as patios.

When you meet with the designer he/she will assess your requirements and provide you with a hand drawn sketch. Our sales staff will be on hand to advise you on products and provide you with samples. Within one week of your appointment you will receive a priced quotation, based on the measurements provided, for the products listed in the design.

**computer  
visualisation free\***

bringing your ideas  
to life

\*One computer visualisation per customer.

Take a digital photo of the area you would like visualised and bring it along to your nearest Tobermore paving & walling centre where trained staff will be on hand to advise you on the best products to suit your style and budget.

Alternatively, email the photo to [images@tobermore.co.uk](mailto:images@tobermore.co.uk) with a brief description of your preferred style, products and what the area will be used for e.g. patio or driveway etc. Within a few days Tobermore will email you a visualisation of your project - you will be amazed at the transformation of your home!

Tegula is manufactured with an aged antique appearance, similar to weathered stone. It is the perfect choice for a modern residence or for adding a touch of character to a period residence.

Tegula Bracken with Tegula Setts Bracken

# tegula setts & circles

Tegula Setts are the ideal product for bordering any of the Tobermore paving products. They blend perfectly with products such as Tegula and Retro but also provide the essential contrast to the modern finishes of Sienna or Shannon. Tegula Setts can also be used independently and can recreate the old cobbled effect of yesteryear.

25 year  
guarantee

# historic flags & circles

Historic Flags provide the look and feel of traditional natural stone with similar hard wearing characteristics. The fettled edges and riven face add to the warmth and charm of these flags and make them ideal for both old and new properties.

- HARD-WEARING SURFACE, FROST PROOF, 50MM DEPTH
- CAN BE LAID QUICKLY ON SAND BED - AVOIDING EXPENSIVE MORTAR BASE

## IMPORTANT INFORMATION

Historic Flags should be butt jointed as wide joints are not recommended. Please use Rompox or similar material to fill joints in preference to mortar, which can stain the product.

INSTRUCTIONS & WARNINGS: See page 40

Kerbstone's unique aged appearance is ideal for use in areas where a natural and unobtrusive edging is required. Kerbstone will harmonise with gravel paths, as well as areas that have been laid in Tegula paving or textured flags. This versatile edging can also be used to construct steps in various designs.

# kerbs & edging

Choose from our wide range of decorative kerbs and edging products to add the finishing touch to any of our ranges of paving blocks or flags. Edges can be softened by planting close to the path verge and allowing the planting to flow naturally over the edges onto the pavement. Paving blocks can be haunched underneath in concrete, allowing grass or planting to grow up to the paving edge. Tobermore have a full range of kerbs and edging products suitable for both heavy and light duty applications.

Country Kerb Granite Aggregate with Tegula Bracken, Heather and Slate

## Country Kerb & Edge

Country Kerbs have an exposed granular surface, emulating the unique aged appearance of traditional granite kerbs, while maintaining the benefits of modern concrete kerbing. They are available in Granite and Standard finish.

## Garden Edge (flat top)

Garden Edging is ideal for paths and patios and available in either Splayed, Flat Top, Round Top or Rope Top.

## Half Battered Kerb

Traditional Half Battered Kerbs are suitable for driveways or other heavy duty applications.

Historic Flags & Circle Harvest Gold with Tegula Setts Bracken

# reduced efflorescence

why put up with  
efflorescence  
spoiling your job...

...when you  
can have this.

## what is Efflorescence?

Efflorescence is the single biggest problem encountered by manufacturers of concrete paving products, as the ugly white stains spoil the appearance of the paving and not surprisingly customers are unhappy.

## reduced Efflorescence

Within our manufacturing process we have taken a number of steps to ensure that the occurrence of efflorescence is very significantly reduced on all Tobermore block paving and slabs.

# tobermore approved paving contractor

Choosing a paving contractor is an important decision. Listed below are some questions you should ask. You should take the answers into account in order to make the best informed decision.

- First ask the contractor how long they have been doing this kind of work.
- Ask them to give you names of customers for whom they have carried out similar work. Do not simply take their names. Call these people to check their level of satisfaction or, better still, go and see the work that was done.
- Make sure that you understand the installation plan well, and ask for pictures as well as samples of products, in the colours of your choice.
- Ask them for a written agreement, before commencing work. The agreement should include a detailed description of the proposed work and schedule for executing it.
- Ask the contractor to give you a written guarantee for the quality of their work.
- Ask if they have full Public and Employer Liability Insurance.
- Book your paving contractor well in advance, as there can be a lead in time of 2-3 months for this skilled service.

Having chosen your contractor, it is essential that you meet on-site at the start to explain in detail your exact requirements.

You should then take an active and daily interest in the job to ensure that the work is done to your satisfaction. All too often problems occur because the customer only inspects the job at the end. Remember it is easier and cheaper to make changes as the job progresses than when it is fully installed.

To avoid wastage you must get your paving contractor to accurately measure on site before ordering material from Tobermore. We often find that the dimensions used for the initial project plan are significantly changed on site. Please note that Tobermore do not accept returns on any materials.

### IMPORTANT INFORMATION

Whilst Tobermore takes reasonable steps to vet paving contractors prior to including them on its list of approved paving contractors, Tobermore does not make or give any representation or warranty as to the work carried out by any of its approved paving contractors, nor does it accept any liability for any loss or damage suffered or incurred as a result of the act or omission of any of its approved paving contractors.

For information on how to choose a paving contractor, visit [www.tobermore.co.uk](http://www.tobermore.co.uk)

TOBERMORE CANNOT GUARANTEE THE WORKMANSHIP OF ANY PAVING CONTRACTOR

# instructions & warnings

(As referred to in Tobermore's Conditions of Sale)

## CORE TERMS (PAVING & WALLING)

### Product

All products should be carefully inspected for defects or damage upon delivery and prior to being laid or fitted.

#### Product Information

Within Tobermore, design and development of products is a continuing process, and product information is subject to change without notice. Accordingly, please check with Tobermore to ensure that the product information you have represents the most up-to-date product information.

### Installation

All products should be installed in accordance with the latest British Standard.

### Colour

Tobermore produces paving and walling products with excellent density and durability, however, as with all concrete products, slight colour variations are inevitable. Although every effort is made to ensure consistency of product colour, variations can occur. In particular, single colours such as Golden, Buff, Natural and Red will have variations. Tobermore therefore recommends that products are thoroughly mixed on site by drawing from a minimum of four pallets.

We would always recommend that when purchasing products, especially in larger quantities, that they are all ordered and manufactured in one batch to reduce the chances of getting colour variation. Please note that the colour of new products will inevitably vary compared to those which have been installed for a period of time as weathering does take place.

All colour illustrations in Tobermore's brochures are as accurate as the printing process will allow. For a more accurate colour match please refer to actual product samples, which can be provided.

### Efflorescence

Efflorescence is a white crystalline deposit that occurs naturally on the surface of concrete materials. Tobermore use market leading technology to significantly suppress the occurrence of efflorescence, however, if it occurs, it may mask the colour of the product for a period of time, but tends to be washed away gradually by rain. Tobermore do not replace products with efflorescence. Packs of products which have had packaging removed should always be re-covered with appropriate packaging to prevent the occurrence of secondary efflorescence.

### Surface Scratches

Minor scuffs or bruises may occur during delivery, movement onsite, and installation (for example, during any plate vibrating process). In Tobermore's experience, these marks usually weather off through time.

### Ordering

To avoid waste, please ensure that your contractor accurately measures the area on site before ordering products. In Tobermore's experience, dimensions taken from a project plan can vary significantly from the final layout.

### Manufacturing & Quality Systems

Tobermore is a BS EN ISO 9001, BS EN ISO 14001 and BES 6001 registered company. Tobermore uses an integrated management system to manage all health & safety and environmental issues.

### Product Maintenance

Routine cleaning and maintenance is required to keep the overall appearance of products in pristine condition.

### Laying multi-blend coloured paving blocks, flags and walling products

To achieve an even blend of colour when laying multi-blend paving blocks, flags and walling products, it is desirable to mix from three or four different pallets.

### Queries & Complaints

Please contact one of Tobermore's Paving & Walling Centres or offices (contact details at [www.tobermore.co.uk](http://www.tobermore.co.uk)) with any queries or complaints. Any complaints must be notified to Tobermore without delay.

## CORE TERMS (PAVING ONLY)

### Product Maintenance

Light coloured paving blocks and flags emphasise tyre marks and oil spills on the driveway. Please note that these products will need more maintenance if overall appearance is to be maintained.

### Initial Cleaning

When an area has just been paved, allow it to settle for a few days. After this, you may wish to lightly hose down the paving to remove any excess sand or dirt. The area should then be treated with a weed killer suppressant 2-3 times per year as required.

### General Cleaning

Paving requires regular maintenance, including regular sweeping to prevent the build up of detritus. Tobermore recommends that paving is cleaned 2-3 times per year.

For general cleaning of dirt and algae, vigorous brushing with a stiff yard brush with plenty of hot detergent solution (washing up liquid or non-bio washing powder), thoroughly rinsed with clean water, should suffice. Repeated treatment may be required for paved areas sited beneath trees or in permanent/near permanent shade.

A light power hose at medium pressure is generally all that is required to clean general dirt and grime. Any jointing material which is removed must be replaced. Do not use high pressure powerwashers as aggressive power-washing can damage the product surface. A trial area should be tested before large scale powerwashing takes place.

### Moss, Lichen and Algae

Thick growths of moss or lichen must be removed first by scraping out the joints and then treating the area with a moss killer such as anti-moss paving cleaner. Anti-moss is designed to remove moss, lichens and algae. It is best applied in dry weather. After being applied it will take a few days to be fully effective. Once the moss and lichens have been killed, they can easily be brushed off. Anti-moss also leaves a residue in the sand joint which will help reduce the likelihood of re-growth. The manufacturer's instructions should always be followed when using any cleaning agent.

### Weeds

Large weeds should be removed by hand and then the area treated with a weed killer (available from any good garden centre). Smaller weeds can then be treated directly with weed killer and these weeds should start to die within days. The manufacturer's instructions should always be followed when using any weed killing agent.

### Block Paving Sealer

It is possible to seal block paving with a resin material which combats staining and weed growth and which also enhances colour and appearance. The acrylic sealer is sprayed onto the block paving and forms a 'skin' on top of the paving and the jointing material giving an easily maintained finish. The manufacturer's instructions should always be followed when using any sealing agent.

## FOR HYDROPAVE PRODUCTS

### Installation - Hydropave

Tobermore recommends that its Hydropave products be installed in conjunction with a BS EN 7533-13:2009 designed permeable paving system.

Note: A permeable paving design relies heavily on using the correct aggregates. Prior to installation, we would ask you to test both the 4/20mm coarse graded aggregate and also the 6.3-2mm bedding and jointing grit as per the relevant British Standard specification (BS EN 13242:2002). In particular, the material should be categorised as LA20 according to Table 9, SZ18 according to Table 10 and MDE15 according to Table 11 within this standard. The grit should be insoluble in dilute hydrochloric acid and should be naturally occurring material. In our experience, incorrect use of aggregates is one of the most common reasons for failure of a permeable paving system.

### Joint Filling

All joints must be filled to the top with 6.3 – 2mm grit to prevent movement and spalling of the blocks. We recommend that after a few weeks use, any joints which have settled and are not full, are topped up with grit. Joints should be kept filled at all times. You will need approximately one tonne of grit for every 100m<sup>2</sup> of 80mm paving.

Note: Care should be taken that the permeable joints do not become contaminated as work on the

scheme is completed. Special care needs to be taken when soft landscaping is carried out so that soil does not enter the joints. When this type of work is being carried out, the surface of the permeable paving should be protected by an appropriate cover to protect the joints from being contaminated.

## FOR FACING BRICK PRODUCTS

### Installation – Facing Bricks

Please refer to Tobermore's detailed 'Guide to the use of Tobermore Concrete Bricks' available on our website: [www.tobermore.co.uk](http://www.tobermore.co.uk)

### Good Practice during Construction

- If mortar dry's on the surface of the bricks it will stain the product and may not be removed.
- Mortar extruding from joints should be removed when the mortar is wet and during the process of laying.
- Any mortar smears on the brick surface should be removed by dry or wet brushing.
- Scaffolding should be installed as per regulatory instructions. Please note that mortar can drop and hit the scaffolding and then also go onto the wall. You should inspect the work area at all times to ensure the brick surface remains mortar free.
- When it rains be careful that any wet mortar on the scaffolding does not get 'splashed' onto the wall.
- When work stops or is interrupted by inclement weather conditions, brickwork should be protected immediately with polythene sheeting that is held in place with a suitable fixing. If new brickwork is not protected efflorescence, patchy mortar colour, patchy brickwork and staining can occur.
- Bricks should always be covered with polythene sheets to avoid getting damp or dirty when not being used.

### General Cleaning Advice

- It is always important to keep bricks as clean as possible while laying and tooling. See Good Practice above.
- If mortar has been allowed to dry on the surface of the bricks the options you have to clean it off are as follows; Each process should be tested first and should ensure the facing bricks are not damaged - a. Dry brushing b. Wet brushing c. Using a 'like coloured' brick to rub the stained brick d. Pressure washing - should only be used as a last resort as it will damage the surface and the mortar joint if not completed correctly (this method cannot be attempted until the area has been allowed to set for a minimum of 7 days).
- Acid cleaning should be avoided.

## FOR COUNTRY STONE PRODUCTS

### Installation – Country Stone

Tobermore's Country Stone products are designed to recreate traditional stone sizes and to co-ordinate with standard cavity wall construction. When used in housing projects, a clear cavity must be retained.

All work must be protected during construction and must be designed and built in accordance with accepted industry standards and practice. Builders familiar with conventional brickwork will find that similar installation principles apply.

Joints can be finished flush or tooled depending on the overall effect required. Raked joints are not recommended. It is vital that all horizontal and vertical joints between Country Stone blocks must be compacted and free from voids. Shell bedding should not be used.

### Movement Joints and Mortar Guidance

1. NHBC recommends that walls constructed of concrete facing bricks should have vertical movement joints included every 6m to allow for drying/shrinkage, see PD6697:2010 section 6.2.6.3.4, maximum ratio for brickwork panels is to be 3:1 length : height. PD6697:2010 section 6.2.6.4 gives advice on joint positions, the benefit of brickwork reinforcement at window openings is covered in section 6.2.6.7 of the same document. Movement joints should be planned prior to commencing any construction to enable them to be concealed behind down pipes etc. and ensure the aesthetic of the building is maintained.

2. It is important to ensure that the mortar specified for the construction is suitable for the contract, see table 15 of PD6697:2010 - class M4 is the maximum recommended for normal external facing brick walls. This should not be exceeded when using Tobermore Concrete facing bricks.

3. We would recommend that you discuss this guidance with all parties involved in the design, construction and installation of this scheme. We also recommend that you refer to BS EN 1996-1-1 and PD6697:2010.

4. Specific professional advice should be obtained at all times before commencing building work.

### Good Practice during Construction

- If mortar dry's on the surface of the bricks it will stain the product and may not be removed.
- Mortar extruding from joints should be removed when the mortar is wet and during the process of laying.
- Any mortar smears on the brick surface should be removed by dry or wet brushing.
- Scaffolding should be installed as per regulatory instructions. Please note that mortar can drop and hit the scaffolding and then also go onto the wall. You should inspect the work area at all times to ensure the brick surface remains mortar free.
- When it rains be careful that any wet mortar on the scaffolding does not get 'splashed' onto the wall.
- When work stops or is interrupted by inclement weather conditions, brickwork should be protected immediately with polythene sheeting that is held in place with a suitable fixing. If new brickwork is not protected efflorescence, patchy mortar colour, patchy brickwork and staining can occur.
- Bricks should always be covered with polythene sheets to avoid getting damp or dirty when not being used.

### General Cleaning Advice

- It is always important to keep bricks as clean as possible while laying and tooling. See Good Practice above.
- If mortar has been allowed to dry on the surface of the bricks the options you have to clean it off are as follows; Each process should be tested first and should ensure the facing bricks are not damaged - a. Dry brushing b. Wet brushing c. Using a 'like coloured' brick to rub the stained brick d. Pressure washing - should only be used as a last resort as it will damage the surface and the mortar joint if not completed correctly (this method cannot be attempted until the area has been allowed to set for a minimum of 7 days)
- Acid cleaning should be avoided.

## FOR SECURA PRODUCTS

### Installation - Secura

All Secura products should be installed in accordance with British Standard BS8002. When constructing a retaining wall, ensure that you follow the design provided by the scheme engineer.
